INTRODUCTION.

THE following is a List of the Batrachia contained in the Indian Museum; it is drawn up on the same plan as the List of the Snakes published in 1891.

The following Tables show the number of species and specimens preserved in the Museum :—

Number of Species.

	Indian.	Exotic.	Total.
Ecaudata	99	56	155
Caudata	1	21	22
Apoda	3	0	3
Total	103	77	180

Number of Specimens.

	Indian.	Exotic.	Total.
Ecaudata	1656	254	1910
Caudata	18	93	111
Apoda	24	0	24
Total	1698	347	2045

The number of species described by Mr. Boulenger in his 'Reptiles and Batrachians of British India' was 130; to these may be added :—

5 new species described by Mr. Boulenger and myself since the appearance of the 'Fauna of British India'
—*Rana assamensis*, *R. limborgi*, *R. tenasserimensis*,
R. oatesi, and *Ixalus travancoricus*.

- 4 species previously confounded with well-known forms now shown to be distinct—*Rana vicina*, *R. granulosa*, *Ixalus cinerascens*, *Bufo stomaticus*.
- 2 species previously unknown to the Indian fauna but since added—*Ixalus asper*, *Microhyla achatina*.
- 6 species confined to the Malay Peninsula and not recorded from British India proper—*Rana hascheana*, *R. plicatella*, *R. glandulosa*, *Bufo penangensis*, *Phrynella pollicaris*, *Megalophrys nasuta*.

Making in all 147 species known from British India and the Malay Peninsula; of these, as is shown in the Table above, the Indian Museum possesses specimens of 103, so that there are still 44 species unrepresented in the Museum, and of these desiderata a list is given below.

The number of type specimens in the Museum amounts to 21, of which 7 were described by Stoliczka, 5 by Anderson, 4 by Blyth, 3 by myself, and 1 each by Blanford and Jerdon; a complete list of these, together with the references to the original descriptions, will also be found below.

The arrangement and nomenclature of this list are entirely formed on Mr. Boulenger's work in the British Museum Catalogues and the Reptiles and Batrachia in the 'Fauna of British India' series, and I have to offer him further my very best thanks for a great deal of help in identifying many obscure specimens and allowing me full access to all the British Museum Collections.

The descriptions of several new species and certain novel facts in geographical distribution and synonymy will be found in a paper published in the Proc. Zool. Soc. for 1892, p. 341, which is referred to throughout the list.

The principal donors of the Batrachia in the Indian Museum are:—Dr. F. Stoliczka, Dr. J. Anderson, Dr. T. C. Jerdon, and Mr. W. T. Blanford from all parts of India; Col. Beddome and Mr. W. M. Daly from South India; Mr. Gammie from the Darjeeling District, and Mr. W. Theobald from Burma; and, finally, Capt. J. Butler and Messrs. S. E. Peal and J. H. Bourne from Assam.

SYSTEMATIC INDEX.

(The names of Indian and Malayan species are printed in small capitals and of exotic species in ordinary type.)
